About this item

- U108 is 20mm high LED channel with 60° Curved Milky White Cover, distributing the light in a semi-circular fashion, so it has a great spotless neon fluorescent lighting effect when working with light strips. Deeper aluminum channels and thicker diffusers have a fantastic, stylish, curved milling on the side, with a substantial feel, which will produce much fewer LED light spots and provide a truly "neon", uniform light
- The inner width of U108 LED housing is 0.5"(12mm), which fits 3528, 2835, 5050, 5630 LED light strip, and any LED strip less than 12mm in width. If you need U108 of the black channel, please search MUZATA U108 BW. Need U108 of 2meter, please search MUZATA U108 2M. Please note that at least 60 diodes/meter to achieve a dotless effect and the effect was truly spotless at all viewing distances
- The LED channels are not flexible and bendable. These LED channels can be joined with extension connectors (search MUZATA LCB1) for longer distance lighting projects. Muzata provides L-shape corner connectors(search MUZATA LCC1), T-shape corner connectors(search MUZATA LC20)
- Muzata U-shape aluminum LED channel is anodized extruded and has great heat dissipation. If you need LED channel with anti-uv diffuser, please search MUZATA UV. The newly-upgraded UV-Protector Frosted Lens Diffuser Covers are more resistant to UV exposure than the regular ones, effectively preventing the diffusers from turning yellow after prolonged use
