LOT 84 - Melnor 2 Output Port Stationary Digital Hose End Timer, See Description

Shipping Available Yes

Description

Melnor 2 Output Port Stationary Digital Hose End Timer

This timer is a return item and has not been tested.

Overview

Take the hassle out of watering the garden. The innovative blue tooth timer works with the Melnor BT Apr to easily set watering schedules directly from your smart device. Choose up to twelve unique watering start times to match your specific lawn and garden needs. If rain is in the forecast, use the watering delay feature to pause the schedule for up to seven days. The regular schedule will resume once the delay is over.

If you need to see when the next watering cycle is scheduled or when the current cycle will end, check the app to see what's going on or make a quick change. Switch over to manual mode through the app or directly at the valve to turn on the water whenever you need it.

- 2 High flow valves to water multiple areas
- Easy and convenient scheduling from your smart device through the app within a range of 30 ft
- Flexible watering options – water on specific days of the week or on a schedule of every few days
- Turn on manual mode from the valve unit or through the app to easily access the faucet whenever you need it

Quantity: 1
