## About this item

- **INNOVATIVE DESIGN** - ToughBuilt leads through innovation, and the Reload Utility Knife is a breakaway example of how we continue to disrupt markets that have remained unchanged for far too long.
- **SIMPLE INTERFACE** - With a simple press of the mag release, a positive, loaded magazine ejection drops mags clear from the tool or into an open hand, and a new magazine can be loaded inside, making a switch from one kind of blade to another a flash. Replacement of worn blades is safe and straightforward with a one-button blade-release function to extract used blades before charging in a fresh one by simply retracting the actuator, and flicking it back in the upward position.
- **BUILT FOR PROS** - Designed for rigorous cross-platform use, positive quality construction featuring smooth aluminum alloy and zinc alloy for corrosion resistance and is wrapped in rugged, and grippy, non-slip rubber soft-touch housing protects the tool from shocks and drops while creating a more dexterous hand purchase on the instrument.
- The integrated finger ridge guard helps keep Pros safe while cutting robust materials. It includes a five-pack of ToughBuilt universal straight-edge blades and a five-pack of ToughBuilt's specialized hook blades, which use a sharp, precision-milled proprietary edge design.
- The patented quick-reloading blade mechanism is actuated by a positive, smooth, rail-driven thumb button; after removing a used blade, depressing the slider, and returning it with a flick, it loads a new blade from the magazine. Internally, each mag holds 5 blades of any type, while the lower chamber reservoir contains room for an additional 10 blades in storage, giving each mag a category-leading 15-blade payload.
