LOT 205 - OMRON M3 Comfort HEM-7155-E Arm Blood Pressure Monitor, New

Description

OMRON M3 Comfort HEM-7155-E Arm Blood Pressure Monitor, IntelliWrap Armband 22-42cm, Intellisense Technology, Clinically Validated, Blood Pressure & Pulse, and Bag

This is a new unit. The monitor can be powered by 4 AA Batteries or plugged in - neither is included. The DC plug-in is on the back, but the cord is sold separately.

About this item

- OMRON The M3 Comfort HEM-7155-E blood pressure monitor is a device that can detect irregular heartbeat during normal blood pressure measurement. It

records irregular heartbeat and independently decides whether the result is reliable or whether the measurement should be taken.

- Store data from two different users to monitor individual values and trends. After measuring blood pressure, OMRON M3 Comfort displays the heart rate and gives the irregularity of the heart rate or exceeding the recommended blood pressure (hypertension)
- IntelliWrap technology allows accurate measurements from any part of the upper arm. Intelli Wrap Technology solves the problem of correct positioning of the cuff on the upper arm. When measuring, the special guide to wrap the cuff can be used (to ensure that the cuff is securely tied around the arm). For accurate readings, any movement during blood pressure measurement should be avoided. The motion sensor indicates in any case excessive movement to avoid false blood pressure values.
- High blood pressure alert indicator: it indicates whether the measured values exceed the ESH guidelines for home self-measurement (systolic blood pressure 85 and/or diastolic blood pressure 135). Average of the last three measurements (within 10 minutes). Armband positioning guide. Saved measurements: 60 x 2 users + guest mode. Motion sensor

Quantity: 1
